

Feather/Teardrop Banner Setup Instructions

Step 1

Remove the pole sections from the carry bag and fit them together to form a complete pole, starting with the thinnest fiberglass section and working down to the largest aluminum section with the hook and bungee cord attached at the bottom.

Step 2

Insert the pole into the pocket that runs up the side of the banner and push it all the way to tip of the pocket. It's important the pole be inserted all the way to the end of the pocket to ensure the banner hangs correctly.

Step 3

Hook the metal clip attached to the bungee cord through the bottom grommet on the banner pocket, and tie the bungee to the metal hook on the lower section of the pole. The bungee needs to be tight enough to keep the banner in place so it doesn't slide up the pole. If the bungee cannot be made tight enough, the metal clip can be moved lower on the pole to create more tension.

Feather Banner Bases

Spike Base

Tap the longer spike section into the ground, and place the bottom of the pole over the short, swivel spindle. Be careful not to damage the swivel spindle when putting the spike into the ground.

X Base

The folding X base is for hard surfaces and is great for use indoors and outdoors. It also has a swivel spindle that the pole fits over. When used outdoors, we highly recommend the Water Bag to add up to 24 lbs of additional weight when filled with water.

Water Base

This hollow base can be filled with water to create a 33 lb base for extra stability on hard surfaces.
